

Healios selected by DiT to showcase digital mental health innovation at HLTH 2022

Healios, the UK's leading private digital mental healthcare provider for children and young people, will showcase its services on a global stage in the US after being selected by the UK's Department of International Trade (DiT).

Healios, alongside its recently-launched US subsidiary, Meliora Health, will join other industry pioneers and thought leaders at HLTH 2022 – a significant health innovation and transformation summit with over 9,000 attendees taking place at the Venetian Expo in Las Vegas from November 13-16.

The DIT received a large number of applications and Healios and Meliora were selected as one of only nine companies to join a delegation showcasing UK excellence in digital health for an international audience.

Adopting a digital-first clinical approach, Healios has redefined the way mental health, autism and ADHD services are delivered to children, young people and families in the UK since it was founded in 2013.

It launched Meliora Health earlier this year in New York and Pennsylvania and has recently completed a £14 million funding round to expand its services across the US.

By teaming expert clinicians with innovative technology and a family-centred approach, Healios and Meliora have enabled tens of thousands of children, young people and their families to access life-changing support from the comfort of their own homes, helping to reduce waiting times and improve outcomes.

Healios and Meliora offer a combination of self-management apps alongside online video sessions – including clinical assessments and a range of psychological interventions such as cognitive behavioural therapy – to children and young people with a broad set of complex needs covering conditions such as anxiety, depression, eating disorders, autism and ADHD.

Rich Andrews, Healios founder and CEO, said he was proud to be showcasing Healios and Meliora at such an important event.

"We're honoured to have been selected by the DiT to be part of the UK Pavilion at HLTH," said Mr Andrews.

"We've long been passionate advocates for the part that technology and innovation can play alongside a world-class care team in transforming mental healthcare for children and young people across the globe.

"We're looking forward to showing how we've established a new norm through digital in supporting a broad and complex range of mental health and neurodiverse conditions that have enabled tens of thousands of children, young people and their families to access support from the comfort of their own homes."
